

The answer is 37 - always!

Here is a really simple little trick that will amaze your parents! They may need a calculator to carry out the sums if they are not too good at division!

1. Ask them to choose any three digit number, but each of the digits must be the same eg 222 or 555.
2. Ask them to add up the digits.
3. Then divide the original three digit number they thought of by the total of the digits added up.

Then tell them that

The answer is
37.....
They will be truly
amazed!!
